Fleet Utilization

Fleet utilization — Active · Idle · In Maintenance vehicle count

● **Insight** TCO: EGP 266,598 · CPM: EGP 3.69/km · Fleet efficiency: 4.83 km/L · 1 broken vehicle(s) — priority: restore to service.

● **Insight** 3 vehicles offline or overdue — potential revenue loss: EGP 95,976. Schedule immediate inspection.

Fuel Consumption

Weekly Fuel Consumption — This Month vs Last Month

Weekly fuel consumption this month (green) vs last month (amber) · % labels show week-on-week change

Top 5 Fuel Consumers — This Month vs Avg 3 Months

Top 5 highest-consuming vehicles — green: this month · amber: historical avg · % = change vs historical average

● **Insight** Highest consumer this month: V-002 (3,713 L, 2.82 km/L). Up 9.5% vs avg 3 months — extra spend: EGP 2,937. Check: tyre pressure (saves 3–5%), air filter (4–6%), driver behaviour (8–15%).

Vehicle Health Status

Investment by Service Category

Left: vehicle health status · Right: maintenance investment by service category

● **Insight** Maintenance at 6.0% of TCO — within acceptable range. EGP 15,967 total · EGP 1,597/vehicle. Monitor monthly trend: sustained increases signal aging fleet or deferred service catch-up.

● **Insight** 146.7 hours of maintenance downtime this month. Estimated productivity loss: EGP 23,951 (vehicle-hours × opportunity cost). Each hour off-road for a heavy truck = EGP 800–1,500 in lost revenue capacity.

● **Insight** 3 vehicles offline (overdue/in-maint/broken) — availability at 50%. Each day offline costs EGP 61 in fixed costs with zero revenue contribution.

Cost Breakdown — Where the Money Goes

Fuel Share of TCO

51.3%

EGP 136,863 · 1.892 EGP/km

Fixed Cost Share

40.6%

EGP 108,347 committed monthly

Avg Cost / Vehicle

EGP 26,660

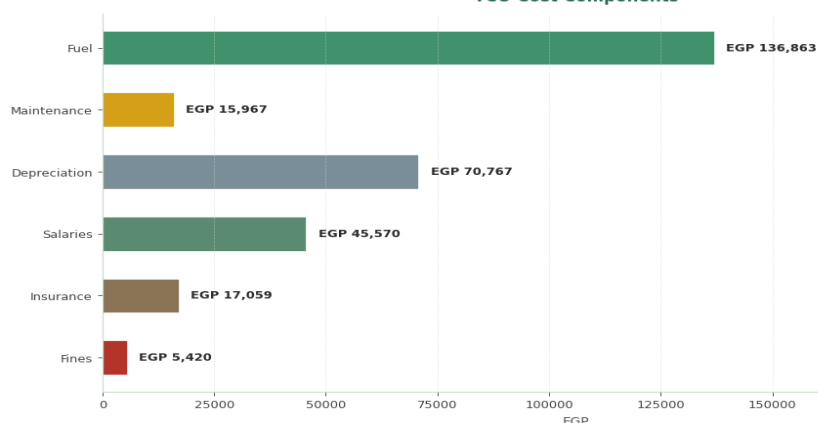

across 10 vehicles · 7,232 km avg

Traffic Fines

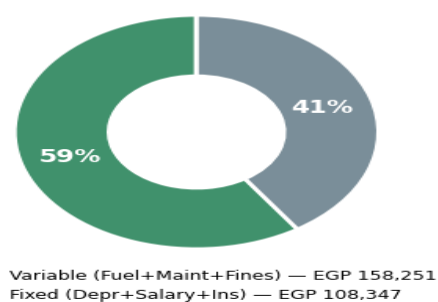

EGP 5,420

2.0% of TCO · 100% controllable

TCO Cost Components

Variable vs Fixed

Left: cost split by component (EGP · % of TCO · EGP/km) · Right: variable vs fixed structure

● **Insight** Largest cost component: Fuel at 51.3% of TCO (EGP 136,863 · EGP 1.892/km). A 10% reduction here saves EGP 13,686/month and cuts CPM by EGP 0.189.

● **Insight** Fixed costs (40.6% = EGP 108,347) are committed regardless of km driven. Depreciation + salaries alone account for EGP 116,338. To lower fixed CPM: increase utilisation — same fixed cost spread over more km = lower CPM.

● **Insight** Fines (EGP 5,420) add EGP 0.075/km to CPM — entirely avoidable. Eliminate fines → CPM drops to EGP 3.61.

Trip Status Distribution

Delivered (138) Delayed (28) Cancelled (12)

Trip Cost Overview

Left: trip outcome distribution · Right: total cost · wasted on cancelled · avg cost per trip

● **Insight** Delivery rate 77.5% is below 80% — every undelivered trip still carries its full operating cost (EGP 547 avg). With 28 delayed + 12 cancelled, wasted spend is compounding. Lowest-performing vehicle: V-001.

● **Insight** EGP 7,720 spent on 12 cancelled trips (7.9% of total trip cost) — zero delivery for this spend. Root causes: vehicle breakdowns, driver unavailability, or client-side cancellations. Each root cause has a different corrective action.

● **Insight** 28 delayed trips averaging 109 min. Delays increase operating cost (idling, extended driver time) and signal route sequencing or vehicle reliability issues. Highest cost/km vehicle: V-005 at EGP 2.70/km.
